To Whom It May Concern:

I have been a Facilities Manager for TXU for over 32 years. In that time I have dealt with many Consultants, Contractors and Suppliers. As a Facility Manager I get bombarded with all types of systems that claim to be "The Answer" for my roofs. Mark Fulfer of Roof Consulting Services, Inc. and their Network of Contractors has been handling all of my Roof Management needs since the early 90's. They are the best I have ever worked with. RCS, Inc. and Mark have solved the headaches faced with managing a huge chain of facilities and the vast array of problems encountered on my many different types of roof systems.

Many years ago someone in our Company bought into the "Single Ply Roof Fad" with very poor results. Mark has replaced most of these for us. One of his systems we have had great success with is their BUR / Modified Bitumen Hybrid Roof System. This is a bright white granulated surface system that often incorporates Tapered Insulation to eliminate ponding water. He has also provided Specifications and conducted jobs that include long term warranties from major manufacturers on numerous facilities that have metal roofs.

When Mark and RCS develop a customized specification for your roof you can depend on it. The Specifications they put together work. Mark has designed customized specifications and conducted the jobs through their network of contractors with a 100% success rate on literally hundreds of thousands of square feet of my roofs.

Mark has a very unique approach that saves everyone money. Mark and RCS are like actually having a full time employee overseeing my roofing, caulking and other building waterproofing needs. Mark saved us over \$140,000.00 on one job alone when I was required by my superiors to get "alternate" bids for the Mesquite Data Center project.

Mark Fulfer, RCS Inc and their unique system exceed any of the Consultants and Contractors I have ever used. He has my 100% Recommendation.

Sincerely,

A handwritten signature in cursive script that reads "Larry Dagen".
